                                                                                                   8
                                                                                                                                               맑
                                                                                                                                                                              S
                                                                                                                                                                                                                                                                                             CC The invention relates to a composition (I) comprising purified CC polypeptides from bacteria. Also described: (1) a crystallized, CC recombinant polypeptide comprising an amino acid sequence of (I), where CC the polypeptide is in crystal form; (2) a crystallized complex comprising CC the crystallized, recombinant polypeptide and a co-factor or a small CC organic molecule, where the complex is in crystal form; and (3) a host Cell comprising a nucleic acid encoding a polypeptide of (I), where a CC culture of the host cell produces at least about 1 mg of the polypeptide CC soluble as measured by gel electrophoresis. The composition and methods CC microbial infections. These may also be used in pharmacogenomic or drug conficency of the CC procedures. The present sequence represents a Haemophilus CC influenzae UDP-N-acetylmuramoylalanine-D-glutamate ligase gene sequence, which is used in an example from the present invention.
                                                                                                                                                                                                                    Query Match

                                                                                                                                               The invention comprises nucleotide sequences (genes) from the genome of nontypeable strain of Haemophilus influenzae (NTH1). The NTH1 DNA sequences of the invention are useful for treating or preventing NTH1 bacterial infections of the middle ear and/or nasopharynx. The present nucleic acid represents an NTH1 contig sequence of the invention.
                                                                                                                                                                                                                                                                                                                                New polynucleotides of nontypeable strain of Haemophilus influenzae, useful for treating or preventing NTHi bacterial infections of the mear and/or nasopharynx.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               middle ear
                                                                                                                                                                                                                                                                                         Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          06-MAR-2003; 2003US-0453134P.

The NTH1 DNA sequences of the invention are useful for treating or preventing NTH1 bacterial infections of the middle ear and/or nasopharynx. The present nucleic acid represents an NTH1 DNA sequence of the invention.

The H. influenzae sequence has been updated by R. Fleischmann. New
database matches have been assigned, product names have been
improved, and a number of frame shifts have been corrected. We
gratefully acknowledge the work of Tatusov et. al. We have
incorporated their annotation into the /notes fields of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        4 (bases 1 to 11498)
